Western blotting analysis using anti-Focal Adhesion Kinase antibody (Cat#50596). Total lysates (30 μ g) were loaded and separated by SDS-PAGE. The blot was incubated with anti-Focal Adhesion Kinase antibody (Cat#50596, 1:2,500) and HRP-conjugated goat anti-rabbit secondary antibody (Cat#201, 1:20,000) respectively. Image was developed using FeQ™ ECL Substrate Kit (Cat#226).

Immunohistochemical analysis of Focal Adhesion Kinase staining in human brain formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.
