Immunohistochemical analysis of NCOA7 staining in human brain formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.

Western blotting analysis of NCOA7 expression in K562 (A), mouse liver (B), mouse kidney (C), rat liver (D) whole cell lysates.
