Validation Data

Human ENG Knockdown Cell Line (WB-Validated)

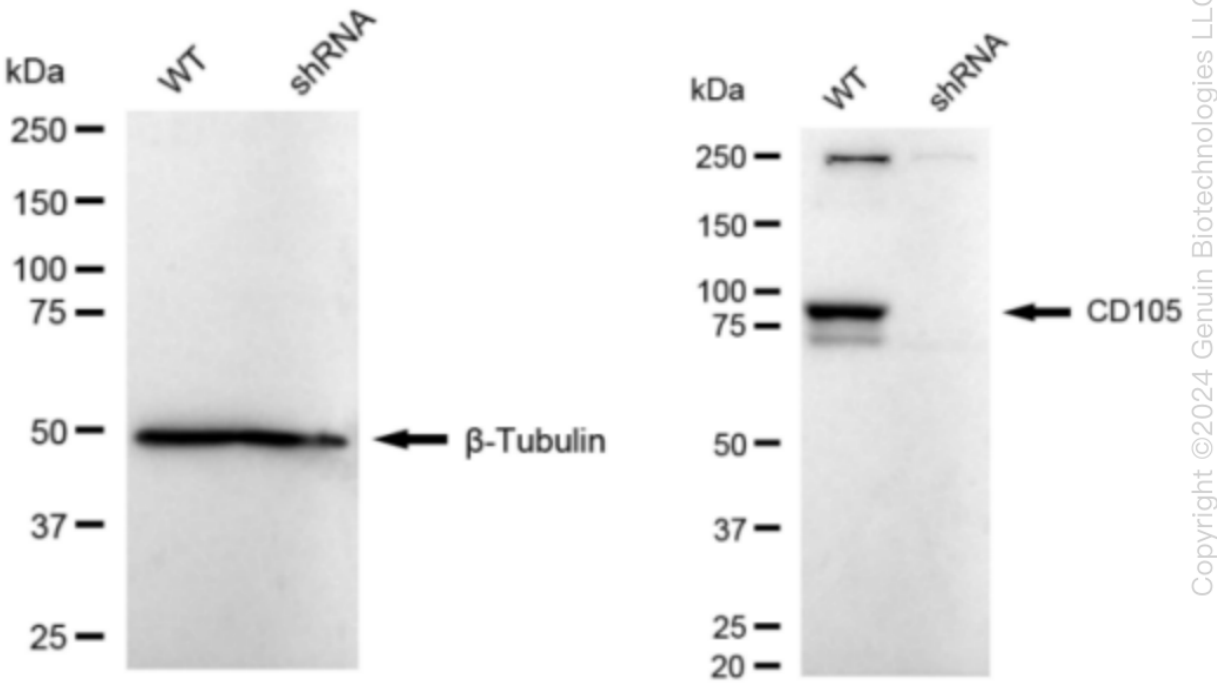
Wild-Type	21.50
Knock-Down	26.29
ΔCt (Ct_{KD}-Ct_{WT})	4.79
% mRNA Reduction	⬇ 96%

RT-qPCR analysis. HeLa cells were infected with ENG-specific shRNA lentiviral particles, total RNA was extracted from wild-type and knockdown cells, RT-qPCR was performed using gene-specific primers. ΔCt (CtKD-CtWT) was used to calculate mRNA reduction (%) between wild-type and knockdown cells using the following formula: (1-1/2ΔCt) x 100%.



Western blotting analysis. ENG protein expression in wild-type (WT) and shRNA knockdown (KD) HeLa cells was detected using Western blotting. β-Tubulin served as a loading control. The blots were incubated with primary antibodies (Cat#61450, 1:5,000) against ENG and β-Tubulin, respectively, followed by incubating with HRP-conjugated goat anti-rabbit secondary antibody (Cat#201, 1:20,000). Images were developed using FeQ™ ECL Substrate Kit (Cat#226).
